System Cleaner Overview

Faronics System Cleaner is a freeware utility that removes temporary and unnecessary files from a workstation, freeing up hard drive space to make an Operating System faster and smoother.

System Cleaner gives users the option to clean their current user profile or add custom folders to be cleaned.

Users have the option to clean Temporary Internet Files, History, Cookies, Temp files, Windows files and the Recycle Bin. They also have the ability to select additional custom folders to clean.

System Cleaner does not delete any folders. All files are permanently deleted and non-recoverable. The full folder path for files to be deleted is always displayed.

Faronics System Cleaner can be downloaded free of charge from www.faronics.com.

System Requirements

System Cleaner is fully supported by Windows 98, ME, 2000 and XP Operating Systems in the English language only. Other languages other than English are not supported.

Windows 98 must be logged on to run System Cleaner.

System Cleaner requires v6.0 of Microsoft Internet Explorer and above.

Deep Freeze Integration

System Cleaner will prompt you with a message by letting you know if your PC is in a Frozen state. System Cleaner will only support v5.7 and higher for Win 2000 and XP operating Systems. System Cleaner on Win 98 and ME will only support v6.0 and higher of Deep Freeze.

Installing System Cleaner

To install System Cleaner, complete the following steps:

1. Double-click on the .exe file and click *Next* to begin the installation process.
2. The installation wizard appears. Follow the steps presented.
3. Click *Install* and *Finish* to complete the installation.

Launching System Cleaner

Faronics System Cleaner can be accessed from:

Start>All Programs>Faronics>Faronics System Cleaner

The first time System Cleaner is launched, the license agreement will be displayed. Accept the License Agreement and click *Next*.

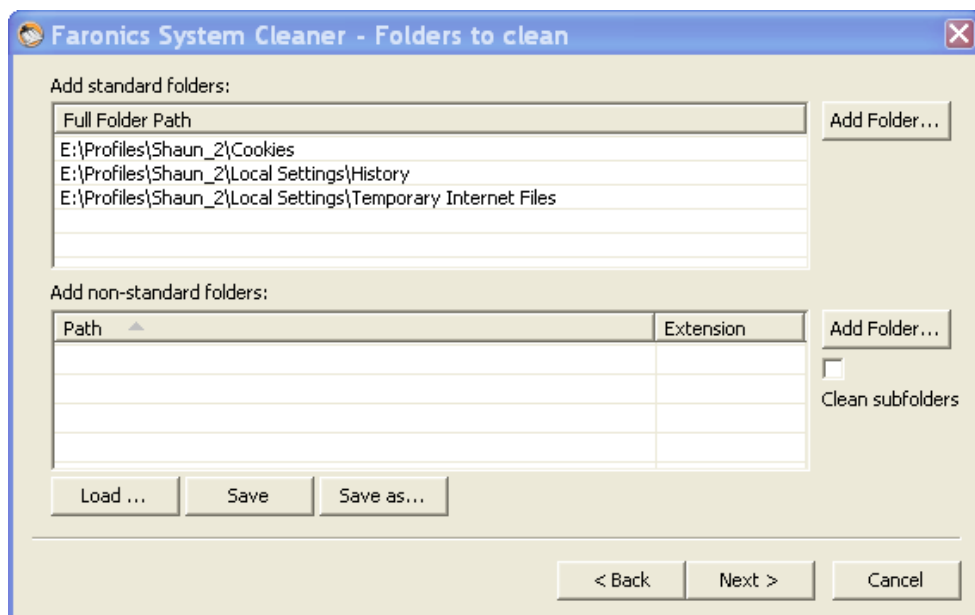

Running System Cleaner

When System Cleaner is launched, the following Start window will appear:

To check for newer versions of System Cleaner click the *Check for Updates* button.

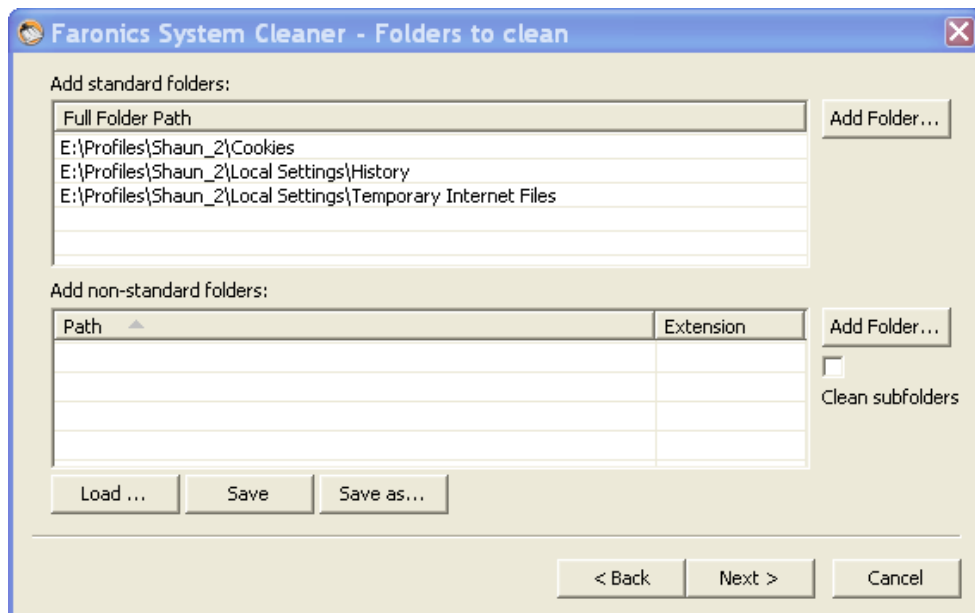

Click *Next* to begin the setup process. You will be taken to the *Folders to clean* window:

The top section of the window displays the path of the default folders to clean. To change, add or remove Standard folders click the *Add Folders* button. You will be taken to the *Add Standard Folders* window:

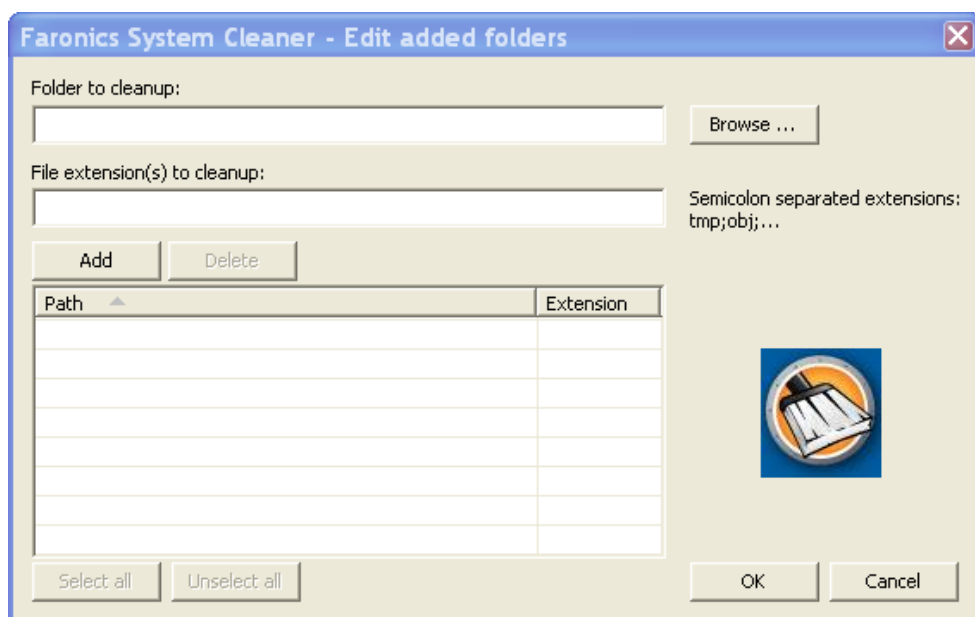

Check or uncheck current user folders or system folders. Click **OK** when you are finished. Click **Cancel** if you don't want to save any changes. This will take you back to the previous window:

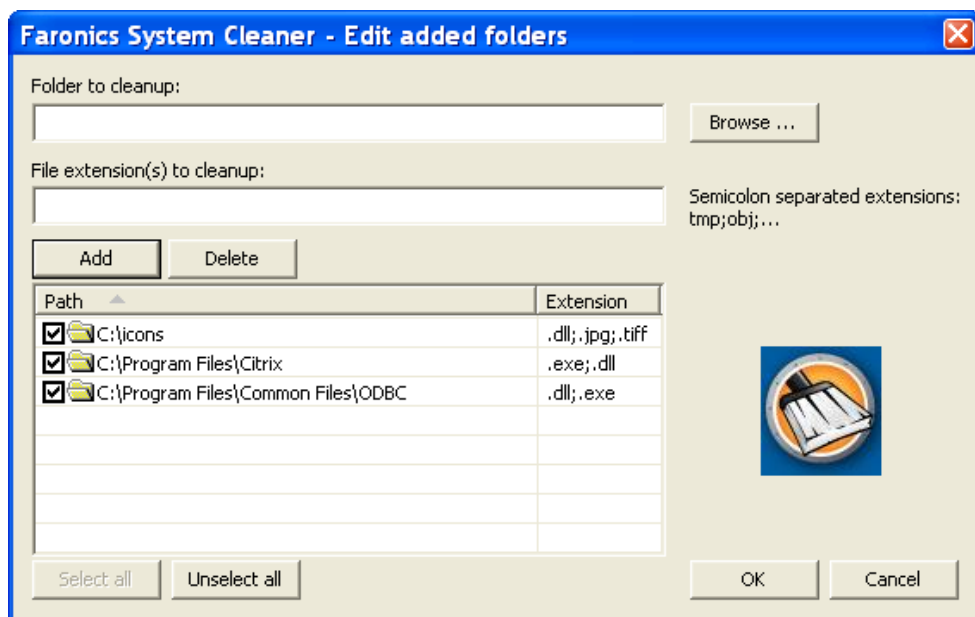

The lower section of the *Folders to clean* window allows you to add any non-standard folders. Note that you will not be allowed to add any folder that is included in the path of any standard folder.

Click the lower *Add Folder* button to take you to the *Edit added folders* window.

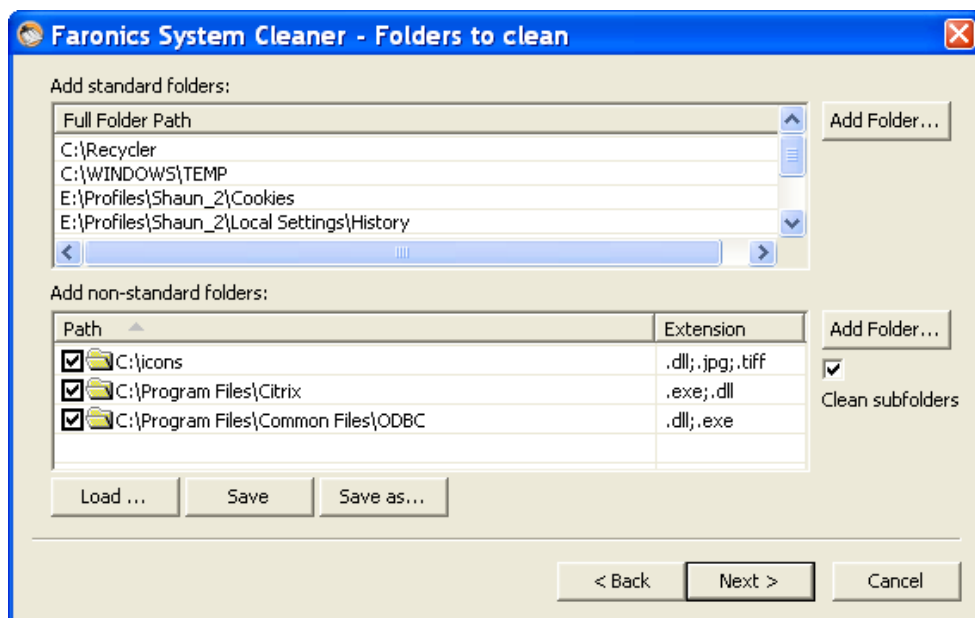

Click the *Browse* button to include custom folders to clean. When you have added additional folders you must add file extensions in the *File extension(s) to cleanup* region. If there is more than one file extension, they must be separated by semicolons ;.

Click the *Add* button to include the folder path(s) with extension(s) in the lower area of the window:

Click *OK* to save your changes and return to the previous screen.

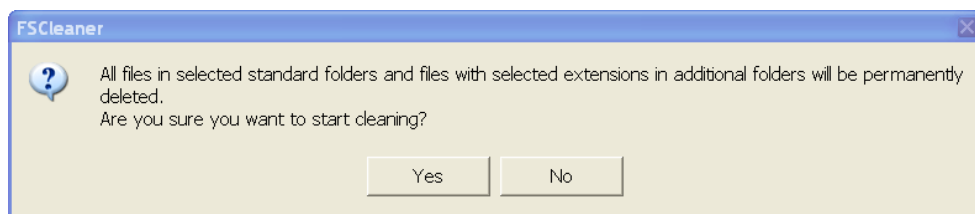

If you would like to clean subfolders within each *non-standard folder* path, click the *Clean subfolders* checkbox.

You may optionally save your System Cleaner settings by clicking the *Save* or *Save as* buttons. Clicking the *Load* button will allow you to open a previously saved System Cleaner configuration file. The file extension must be *.ini*.

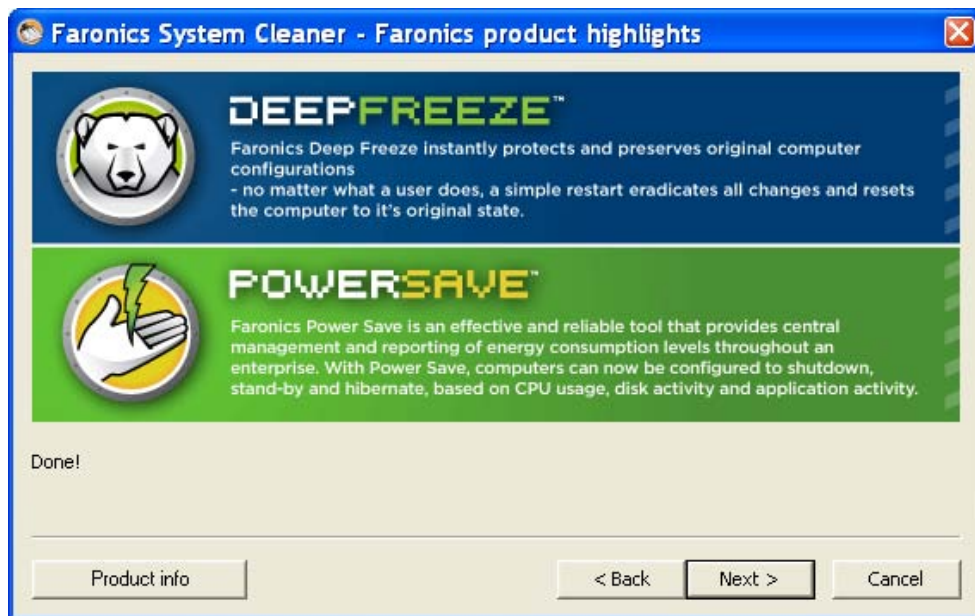

Do not modify the .ini file manually. This may corrupt the .ini file and prevent System Cleaner from using this file.

Click *Next* to continue with the cleaning process. A message will be displayed reminding you that all files in the selected folders will be permanently deleted:

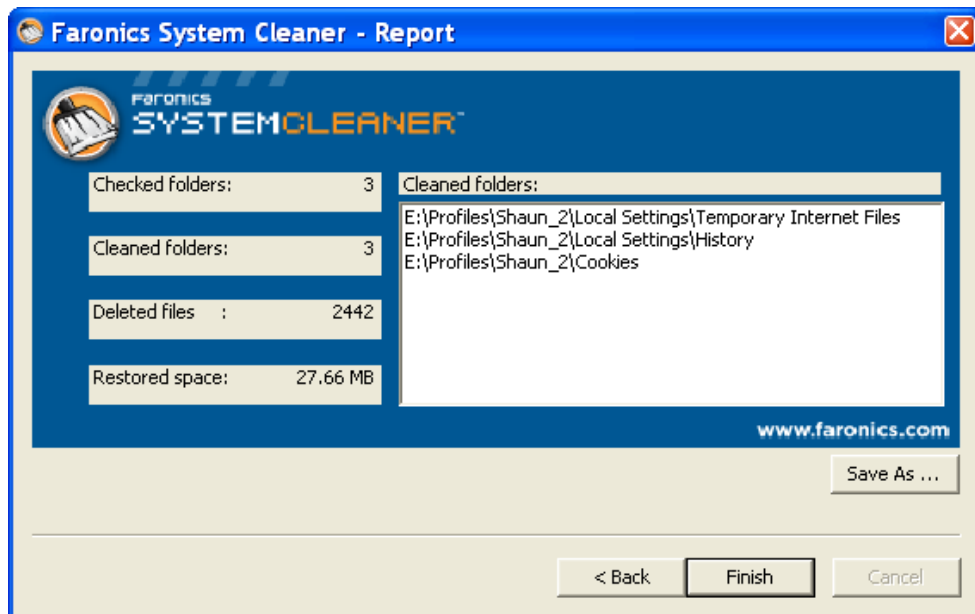

Click *Yes* to proceed with the cleaning process. Click *No* if you would like to cancel the cleaning process.

The following screen provides information during the cleaning process and will let you know when System Cleaner is finished.

Click the *Product info* button to be taken to the Faronics Product web page.

Click *Next* to view the *Report* window:

Click the *Save As* button to save the report statistics to your desired location. If you do not select this option System Cleaner will remind you with a message when you are done.

Click the *Finish* button to close System Cleaner and end the session.

Silent Mode Command Line Specifications

Faronics System Cleaner includes a silent mode executable file in the installation folder.

The executable file, Silent_System_Cleaner.exe is automatically created when System Cleaner is installed on your system. The location of this file is;

C:\Program Files\Faronics\Faronics System Cleaner.

The following commands are available:

Command	Function
/i	Cleans Temporary Internet Files
/h	Cleans Internet History
/c	Cleans Cookies
/t	Cleans Temporary Files
/w	Cleans Windows Folder
/r	Cleans Recycle Bin
/?	Displays Help

Example command:

```
silent_system_cleaner.exe /i/h
```

The above example will clean Temporary Internet Files and the History folder. When System Cleaner is finished it will provide report statistics within the command window.

Silent Mode - Command Line with System Cleaner Configuration file

It is possible to clean your system using Silent Mode and your saved System Cleaner settings. If you use this method you cannot use any of the command line options listed above.

Example command:

```
Silent_system_cleaner.exe cleaner1.ini
```
